# Introduction

## Premium rates summary

The average premium rate in 2023 is \$1.30, which remains unchanged from the 2022 premium rate and is the lowest it's been in more than 20 years.

Businesses eligible for a reduction will continue to see decreases to their premium rate. Businesses with projected increases due to their individual and/or class risk and experience will move up a maximum of two risk bands from their prior year risk band (approximately 10 per cent) toward their projected premium rate.

After considering the 2022 surplus distribution of \$1.27 billion and reflecting investment losses, our surplus position at the end of 2022 was close to the mid-point of the funding target range of 110 to 120 per cent. This favourable position allowed us to continue to price without margins, enabling a flat average premium rate.

## Establishing premium rates

Our workplace safety and insurance system for Schedule 1 businesses is funded through both investment earnings and premium rates applied to Schedule 1 businesses' insurable earnings. Schedule 1 businesses aren't all charged the same rate. Each business is assigned to a class/subclass aligned with the North American Industry Classification System (NAICS) based on the type of work they do. Businesses that have more than one business activity will be classified according to their predominant business activity – the business activity with the highest amount of insurable earnings.

Each class/subclass has a different premium rate, reflecting the average risk of the business activities insured in that class/subclass. More details on classification are available in our [Employer Classification Manual](#).

The average 2023 premium rate reflects higher New Claims Cost (NCC). This is because of expectations of higher inflation, higher expected COVID-19 claims costs and higher volume of active claims. The administration component has decreased due to a reduction in administrative expenses and an expectation of substantial insurable earnings growth in 2022 and 2023.

As of July 1, 2022, the costs and counts of COVID-19-related claims will be applied in the calculation of Schedule 1 businesses' individual premium rates. COVID-19-related claims with accident dates on or after July 1, 2022 will affect Schedule 1 businesses in the same manner as the other allowed claims they incur. Costs and counts for COVID-19-related claims allowed with accident dates on or before June 30, 2022 will be allocated on a schedule-wide basis for Schedule 1 businesses and won't be reflected in each business's individual claims history. This change does not impact the 2023 premium rates but will impact future premium rate years as the accident year 2022 emerges in the review window.

## Determining 2023 rates

We calculate premium rates annually to reflect businesses' ongoing experience and the WSIB's latest financial requirements and targets. Under our rate-setting model, each of the 35 classes/subclasses has a series of risk bands and each risk band has an associated premium rate, either above or below the 2023 class rate.

The 2023 class rate represents the premium rate a business would pay based on the collective risk profile for all businesses within the class and the class's shared responsibility to maintain the insurance fund. If the 2023 class rate changes as a result of that class's overall claims experience, it will affect the other risk band rates within that class.

Each business is assigned to a projected risk band that best represents its risk in relation to other businesses in its class. The difference between successive risk band rates is approximately five per cent.

Projected rates are determined based on our rate setting model introduced in 2020, which better reflects individual claims experience and uses a two-step approach to set and adjust premium rates for businesses:

**Step one:** setting the class rate for each industry class/subclass based on their risk and share of responsibility to maintain the insurance fund.

**Step two:** setting the projected rate for each business based on their individual claims history compared to the rest of the businesses in the class/subclass. This means your projected rate will reflect your individual claims experience and risk.

To help businesses prepare for any projected rate increases or decreases in our new model, rate movement is subject to transition rules during the transition period (as defined in the [Transition policy](#)) and regular rate setting movement rules thereafter.

Businesses in a given class that fall under the same projected risk band have similar risk profiles and will have the same projected rate.

The following rates are determined for each business:

1. Projected premium rate: the rate the business would pay if there were no limits in risk band movement. This rate reflects the business's individual claims cost experience relative to the class, to the extent the experience is predictable (or credible).
2. Prior year rate: in 2023, this will be the 2022 actual premium rate businesses paid, excluding the [mine rescue modifier](#).
3. Actual premium rate: the rate a business will pay after applying the risk band movement limits defined by the [Employer Level Premium Rate Setting policy](#) to the prior year rate towards the projected premium rate after the transition period. In 2023, the [Transition policy](#) will be applied.

We used the following process to determine 2023 rates:

1. Determine overall Schedule 1 average rate: \$1.30 for 2023 premium year.
2. Determine a fair cost (i.e., claims-based cost) for each NAICS class/subclass that recovers the required premium in total for the whole of Schedule 1.
3. Determine the 2023 class rate for each class that recovers the necessary premium based on insurable earnings distribution by risk band. The 2023 class rates and their corresponding risk band premium rates are included in the [2023 class rates for risk banding](#) and [table of risk band rates](#) sections.
4. Determine businesses' projected risk band and projected rate based on their experience relative to the class.
5. Determine the prior year risk band for each business by placing the prior year rate into the 2023 risk band structure. The prior year risk band and its corresponding prior year rate are determined using the table of risk band rates.
6. Compare the projected risk band for each business with the prior year risk band and apply transition rules. Transition rules (for 2023, increases of up to two risk bands for those requiring an increase or , unlimited decrease for those requiring a decrease) will determine the business's actual risk band and its corresponding actual rate.
7. Adjust actual rates as needed to recover transition costs.

See our policy on [Employer Level Premium Rate Setting](#) for more details on premium rate setting.

The WSIB's Board of Directors approves the average Schedule 1 premium rate, class rates and rules for determining the actual premium rates. Premium rates are expressed as a dollar amount per \$100 of insurable earnings.

## Premium components

Premium rates include an amount for:

1. NCC – this covers the projected total future cost of injuries or illnesses expected to arise during the upcoming year, including any additional margins the WSIB may require.
2. Administration expenses – the cost required to administer the workplace compensation system in Ontario and fulfill legislative obligations.

The premium components reflect the total premium requirement for all Schedule 1 businesses. Each class/subclass's premium rate includes an NCC and administration expense amount, which is allocated based on claims experience and insurable earnings data from the most

recent six years. For the 2023 projected rate, this is 2016 to 2021. The class/subclass premium rate components section includes additional detail.

The maximum insurable earnings ceiling for 2023 is \$110,000, compared to \$100,422 in 2022.

## Classification scheme and data sources

Businesses are assigned one or more six-digit codes adapted from NAICS classes/subclasses based on their business activities. The majority of businesses will have a single business activity. Those with more than one business activity will be classified according to their predominant business activity.

Businesses with distinct and unrelated business activities can request multiple classes/subclasses. They will be eligible if they meet the WSIB's multi-rating policy criteria. See our [Single and Multiple Premium Rates policy](#) for more information.

Certain businesses have been classified using an alternative approach due to their unique circumstances based on the workplace safety and insurance system. This includes [non-exempt partners and executive officers in construction](#).

These special cases are relevant only for industry classification by the WSIB, not to broader economic analysis. The NAICS system does not recognize this alternate treatment, so the WSIB has established additional six-digit class/subclass codes to handle classification of these businesses.

The figures shown in this manual are based on data available as of January 2022. You can [contact the WSIB](#) for more information.

## Our role

The WSIB is a statutory corporation created by an Act of the Ontario Legislature in 1914. The WSIB is responsible for administering the *Workplace Safety and Insurance Act*. The WSIB receives no government funding. We are funded solely through premiums paid by businesses insured by us. Revenue is also raised through returns on invested assets.

We help support people and businesses affected by workplace injuries and illnesses – providing a comprehensive bundle of insurance benefits as set out in the Act helping people recover and return to work by:

- providing benefits to people who become injured or ill at work and the dependents of people who have died as a result of a workplace injury or illness
- assisting in the return to work and recovery of people with work-related injuries or illnesses

Businesses covered by the *Workplace Safety and Insurance Act* are divided into two groups, referred to as Schedule 1 and Schedule 2. This manual pertains to Schedule 1 businesses only.

## Table of risk band rates

We began using risk bands as part of our premium rate setting process in 2020. This process relies on pre-defined tables of risk band rates. There is one table applicable for each of the 35 classes/subclasses adapted from NAICS, which include the following:

- the risk band numbers
- the associated range of risk profile index values
- the class rate (risk band 60 in the risk band tables)
- the risk band rate factor
- the risk band premium rate, which equals the 2023 class rate (risk band 60 in the risk band tables) multiplied by the risk band rate factor

To determine the projected rate, the maximum risk band for any class/subclass is 83 (i.e., 23 risk bands above the class rate's risk band). For 2023, the minimum premium rate is \$0.07. The lowest risk band for any class/subclass cannot have a rate below \$0.07. This minimum premium rate applies to all classes, but the minimum risk band differs by class.

The risk band tables are also used to determine the prior year risk band (or starting point risk band) with no limitations. The following general rules can be used to expand the table:

- For risk bands below the class rate, the rate factors will be determined by applying a five per cent discount to the risk band factor of the risk band above. This means the risk band factor is 95 per cent of the risk band factor for the next band up. The risk band factor will be the lower limit of the risk profile index range.
- For each risk band above the class rate, the rate factors will be determined by applying a five per cent increase to the risk band factor of the risk band below. This means the risk band factor will be 105 per cent of the risk band factor for the next band down. The risk band factor will be the upper limit of the risk profile index range.
- The risk band rate equals the class rate multiplied by the risk band rate factor.

## Transition to our new model

### Transition approach

To help businesses smoothly transition to our rate-setting model, any initial projected rate increases will be staggered over time. The staggered approach was delayed by one year because of the decision to keep 2021 rates the same as in 2020.

We resumed the transition approach to our rate-setting model in 2022. We continued the transition approach in 2023.

### 2023 transition funding

The transition funding adjustments are applied to those businesses that are eligible for decreases in order to achieve revenue neutrality. However, we make sure businesses that are entitled to a decrease will see at least one risk band decrease after applying transition funding.

In 2023, the transition cost modifiers resulted from applying the following rules:

- the business will move down one risk band from the starting point risk band if the projected risk band is less than 20 risk bands lower than the starting point risk band
- transition funding will be 150 per cent times the projected rate before modifiers if the projected risk band is 20 or more risk bands lower than the starting point risk band

We'll only apply transition funding adjustments during the transition period, which will end in 2024 when our regular premium rate setting policies are fully in effect.

Please see our [Employer Level Premium Rate Setting](#) and [Transition](#) policies for more information.

## Definition of 2023 premium rate components

### New Claims Cost

This covers the projected total future cost of injuries expected to arise in 2023.

### Administrative expenses

1. Administrative expenses

The estimated expenses for the WSIB to administer the *Workplace Safety and Insurance Act* in 2023.

2. Legislative obligations

The expenses the WSIB must fund under the *Occupational Health and Safety Act*, the Workplace Safety and Insurance Appeals Tribunal, Office of the Employer Advisor, Office of the Worker Advisor, Health and Safety Associations and research in 2023.

3. Total administrative expenses

The total administrative and legislative obligations expenses. This is the cost required to administer the workplace safety and insurance system in Ontario and fulfill legislative obligations.

### Premium rate

Total cost per \$100 of insurable earnings required to fund new claims and administrative expenses.

## Premium rate setting allocation rules for class/subclass

### New Claims Cost (NCC)

Each class/subclass may see changes in its NCC from year to year. To minimize this volatility, the NCC is determined first for six 'super classes' – groups of classes/subclasses in similar broad economic sectors – and are then distributed over the classes/subclasses in the super class group using their claims cost ratios (CCR).

The CCR for each class/subclass is compared to the CCR of its corresponding super class. This ratio indicates the relative costliness of an average claim for the class/subclass compared to the average costs of the super class. The CCR is the ratio of six years of costs to six years of insurable earnings. The CCR used is the average of the CCRs for the last three calendar years to enhance stability.

In 2023, the super classes are defined as follows:

Class/ subclass	Class/subclass description	Super class
<b>A</b>	Agriculture	Other industries and services
<b>B</b>	Mining, quarrying and oil and gas extraction	Other industries and services

## New businesses

A new business is assigned one or more six-digit codes adapted from NAICS when they register with the WSIB, according to their business activities. The business's predominant class is determined at that time.

Businesses with coverage in Schedule 1 for less than 11 months in the review period are considered new businesses – subject to the transition rules applicable to all businesses – until there is sufficient accident cost and insurable earnings information to calculate their risk profile in the review period, so we can then calculate a premium rate relative to the class rate. Please refer to the [Employer Level Premium Rate Setting](#) policy and the [Transition](#) policy for more details.

In 2023, the review period covers 2016 to 2021:

- new businesses in 2022 and 2023 are assigned the 2023 class premium rate of their predominant class
- new businesses that started between February 1, 2021, and December 31, 2021, will also pay the 2023 class premium rate of their predominant class
- new businesses aren't subject to transition charges

Our new premium rate setting model ensures all new businesses take part in the premium rate setting process as soon as possible.

## Multi-rated businesses

Businesses that operate distinct and unrelated business activities can request multiple classes/subclasses and are eligible if they meet our multi-rating policy criteria. You can view our policy on [Single and Multiple Premium Rates](#) for more information.

Class rates reflect classification reporting from businesses. Classification shifts due to multi-rating will be reflected in future annual adjustments to class rates.

## Non-exempt partners and executive officers in construction

Since 2020, non-exempt partners and executive officers in construction previously classified under rate group 755 continue to receive a separate premium rate. This premium rate reflects the low risk of their work compared to the rest of the construction industry.

The same premium rate is assigned to all non-exempt partners and executive officers in construction each year, although they're classified under any one of the five construction subclasses depending on their construction business's operations. The 2023 rate for this group is \$0.13 per \$100 of insurable earnings.

The 2023 premium rate considers the collective experience of all non-exempt partners and executive officers in construction as if they were a single business in the construction subclass with the highest percentage of insurable earnings and applies our rate-setting formula to it. Review our policy on [Employer Level Premium Rate Setting](#) for more information.

In 2023, the construction subclass with the highest percentage of insurable earnings from non-exempt partners and executive officers in construction is G4, Building Equipment Construction, based on insurable earnings from 2019, 2020 and 2021. The following chart shows the distribution of insurable earnings among construction subclasses from 2019 – 2021:

Predominant class	2019 insurable earnings (in millions)	2020 insurable earnings (in millions)	2021 insurable earnings (in millions)	2019 - 2021 insurable earnings (in millions)	%
G1	\$85.0	\$86.2	\$95.9	\$267.1	15%

G4	\$130.1	\$135.3	\$135.0	\$400.4	23%
G5	\$128.0	\$123.6	\$138.4	\$390.0	22%
G6	\$74.6	\$73.8	\$79.1	\$227.5	13%

<b>Total</b>	<b>\$560.6</b>	<b>\$571.5</b>	<b>\$608.1</b>	<b>\$1,740.2</b>	<b>100%</b>

\*Pure Construction Executive Rate (CER), refers to businesses classified only in rate group 755 in years before 2020

The predominant class is determined for each business by considering construction business activities only. Class G4 is the construction subclass with the highest percentage of insurable earnings from non-exempt partners and executive officers in construction.

# Steps for calculating the 2023 non-exempt partners and executive officers rate

## Actual rate before modifiers (your rate)

The 2023 actual rate for non-exempt partners and executive officers in construction is \$0.13. The projected rate in the chart is shown for illustrative purposes.

Transition rules are applied as for any other business:

- the following is the derivation of the projected premium rate that shows the future direction of this premium rate if there’s no change in the group and class experience from year-to-year
- the classification of claims in the non-exempt partners and executive officers in construction group are frequently reviewed to confirm their classification

## Predictability 90 per cent (for all non-exempt partners and executive officers in construction rated as a single business)

Six-year total insurable earnings	\$3,364,136,177.99
100% insurable earnings predictability standard (12,000 x \$110,000)	\$1,320,000,000.00
Actuarial predictability of insurable earnings (capped at 100%)	100.000%
Six-year claim count	53
100% allowed claim count predictability standard	1,200
Actuarial predictability of total number of allowed claims (capped at 100%)	21.016%
Predictability value = 75% based on insurable earnings + 25% based on total number of allowed claims	80.254%
Actuarial predictability (arrived by locating the predictability value in the predictability scale)	90%

## Greater employer accountability mechanism

Businesses in a class/subclass who consistently have poor experience are potential candidates for further engagement on their health and safety and return-to-work practices. They could see a significant rate increase three years after being identified as a potential candidate if they don't participate or can't show improvement.

The mechanism addresses two types of concerns for outliers:

- 1) encouraging health and safety and return-to-work practices
- 2) providing additional warranted premium equity

Businesses can find their eligibility for this mechanism under "Section B – Your rate before modifiers" of their annual extended statement. They can find their annual extended statement through our [online services](#). There was no impact to premium rates in 2023. Review our policy on [Employer Level Premium Rate Setting](#) for more information.
